HYBRID TEA ROSES

Hybrid-tea, or commonly called ever blooming roses, have proven to be the most popular and useful roses for the garden. Their flowers have beautiful form, fragrance and color in bewildering variety. The bushes usually grow 1½ to 3 feet high. All the varieties listed here are hardy enough to withstand the winter in almost all parts of the United States and Canada, provided they are properly protected when zero weather occurs.

Our Roses are 2 Year Old Field Grown, budded on 3 year old Japonica Multiflora understock. This understock is conceded to be the best general one to use because of its vigor, hardiness and wide adaptability to varying climatic and soil conditions. It is used by leading reputable rose growers. Our roses are grown in fertile clay in northern Ohio under expert care. Much of a plant's success depends upon its roots. Our soil and methods emphasize the development of good root systems. The bushes are regularly sprayed and dusted to prevent diseases, thus insuring the purchaser healthy, vigorous and hardy plants.

Many people are under the impression that growing roses requires special skill and much labor. A rose is like any other living thing, and if given half a chance, will reward the grower with an abundance of quality blooms. One of the most important factors to insure success with roses, is to purchase good plants. Bargain, or cheap roses, may give results but their chances of re-establishment, growth and bloom are far less and in most cases they die in a year or two. The contrast between the results obtained with cheap roses and that obtained with planting good ones is so great that the difference in price is well worth while.

Having reasonable good soil and good plants to start with, preferably fresh from the grower. roses will amply reward the purchaser. Roses may be planted in the spring as soon as the frost is out of the ground. We find that late plantings do not do as well as earlier ones. The sooner you plant, the sooner your roses will bloom. You should be guided by climatic conditions in your section and the experience of successful local gardeners.

Complete planting instructions sent with each order.

TESTIMONIALS!

Our Roses are the finest quality, No. 1 stock. They are all northern grown under scientific condition and must not be compared with inferior, cheaply grown plants.

Here are a few statements from some of our enthusiastic customers.

From FAIRPORT HARBOR, OHIO.

Mrs. H. M. writes:

"Am pleased to report that the ten rose bushes which I purchased from you in the fall of 1938 produced 625 blooms on actual count in the summer of 1939. The plants were all healthy and vigorous and easy to take care of."

From MANISTIQUE, MICH.

Mr. W. D. H. writes:

"The Roses that I received from you last fall are doing just fine. They have put on a lot of new growth and are all in bud again. Compared with the other roses that I have, yours are so far ahead of them that there really is no comparison. I gave one of your lists to a friend from Evanston, Ill. who claims to have quite a number of roses around his place. He says he has none that can compare with mine for robustness and vigor. In fact he said he never saw such strong healty plants."

From OAKLAND, CALIF.

Mr. W. L. writes:

"Don't know what your Ohio roses have that our own roses do not, but must say the plants that I purchased from you have done double duty in this climate. The Etoile De Hollande was fully 10 in. in diameter and the blooms were of such intense coloring that they almost looked artificial. The other varieties did equally as well but were not quite as large. Will have to admit that your plants do exceedingly well in this climate, and I am glad to recommend them to anyone interested in roses."

From ARLINGTON, MASS.

Mr. C. C. W. reports:

"The roses purchased from you certainly have proved themselves to be of hardiness and vigor. Owing to unavoidable circumstances, I was forced to transplant them during the blooming season. Naturally I did not expect them to do much for the balance of the season as I know their transference was contrary to all rules of rose planting. However they produced a satisfactory number of blooms that same fall and the following spring my garden was the envy of all the neighbors. I can truly say that I am very much pleased with your rose plants."
